ATOSS World

Microservice Development

ATOSS World is a one stop cockpit for enterprise customers to view, buy, upgrade and billing of ATOSS Products in their portfolio. The project is based on cutting edge technologies and cloud native event driven architecture which involves:

- Creating microservices to retrieve customer data from a CRM system and display them on the UI.
- Exposing Rest APIs for CRM system to securely send data to the microservice.
- Deployment of microservice to hyperscaler (GCP, Azure) in an automated way.

Technologies and frameworks

VueJS, Redis, Docker, K8s, Golang, GraphQL, REST

ATOSS Idea Management System

Product Mission Statement

The ATOSS Idea Management System (AIMS) supports a systematic and structured process of generating, capturing, discussing and improving, organizing, evaluating and prioritizing valuable insight or alternative thinking (ideas) that would otherwise not have emerged through normal processes. AIMS helps to keep track of the ideas, to push them to their fullest potential, to drive and cultivate innovation, to increase employee engagement to constantly increase revenue, margin and customer experience.

Technologies and frameworks

Java, JavaScript ES6, NodeJS, VueJS, Spring Boot, REST, Maven, SQL / NoSQL databases

Closed doors navigation

Improving the Mobility of the Visually Impaired People Through Technology

Mobile outdoor GPS navigation apps have proven to be lifesavers for the visually impaired people. With a smartphone in hand, the way to a destination can be easily found, even in an unknown place. However, it is still easy to get lost indoors, where GPS satellite signals cannot be accurately tracked by navigation apps. Here begin our challenges:

- Creating a map by using the smartphone sensors, any available mobile network, Wi-Fi or GPS signal.
- Creating a fully accessible, easy-to-use and efficient navigation app for blind people.

Technologies and frameworks

Machine learning algorithms, state-of-the-art mobile and navigation technologies

Through your participation in these projects

You participate in major steps of the development lifecycle: design, implementation, testing, deployment and evaluation

A mentor will support you through the entire project, after an initial training phase which will familiarize you with the technologies you will be using

You will learn and work with next gen technologies like VueJS, Redis, Docker, Golang, GraphQL, REST, hyperscalers (GCP, Azure), mobile and navigation technologies or cutting edge Java based technologies like Spring Boot, JavaScript, NodeJS, VueJS, REST, Maven

ATOSS INTERNSHIP July–August 2022

Start your future with us!

Join in our summer internship program

Employment contract: part-time, 6 hours per day, for a determined period of 2 months.

Remuneration: 4500 RON (gross) per month.

Location: ATOSS office in Timisoara within the VOX Technology Park.

Accommodation and travel expenses: covered by ATOSS throughout the internship held in Timisoara

Career: opportunity to start your career at ATOSS working remotely or in our modern office.

Send your application: recrutare@atoss.com by end of May 2022 and our recruiters will contact you with further details

**We would be
looking forward!**
