Students/graduates take responsibility for their own professional development</li> </ul> |

## 7. Course objectives (associated with specific learning outcomes)

- The **Academic Ethics and Integrity** course is part of the *Electronic Engineering, Telecommunications and Information Technology* field and aims to familiarise students with the fundamental principles, values and norms of academic ethics and integrity in research, education and scientific communication. The course provides conceptual guidelines and practical tools for developing responsible conduct in academic and professional activities. Through the topics covered, the course contributes to the development of transversal skills in ethical reflection, recognition and prevention of deviations from good academic conduct (plagiarism, falsification, dishonesty, misuse of data), but also to the formation of a proactive attitude towards compliance with ethical and legal norms specific to the technical-scientific field.
  - The rationale for including the discipline in the curriculum lies in the need to strengthen the culture of integrity among future data engineering specialists, a field in which accuracy, transparency and responsibility in information management and communication are essential values.
- At the end of the course, students will:
- understand the importance of ethical principles and integrity in academic work, research and the professional environment;
  - recognise the main types of ethical misconduct and know how to avoid them in academic practice;
  - apply ethical and legal standards relating to intellectual property and data use;
  - demonstrate responsibility, honesty and respect for their own work and that of others;
  - adopt ethical conduct in the process of learning, research and scientific communication.
